

## ABOUT PROJECT LIFESAVER

Project Lifesaver is the premier search and rescue program operated internationally by public safety agencies, and is strategically designed for “at risk” individuals who are prone to the life threatening behavior of wandering. The primary mission of Project Lifesaver is to provide timely response to save lives and reduce potential injury for adults and children with the propensity to wander due to a cognitive condition.

**There are three key components utilized by the Project Lifesaver program which enable first responders to achieve the program’s mission of “bringing loved ones home.”**

### CUTTING EDGE LOCATING TECHNOLOGY

Project Lifesaver is in a constant state of research and development to ensure the latest and most effective technologies are being utilized by the program both in the prevention of wandering and the recovery of a client in the event of elopement.

## INNOVATIVE SAR METHODS

Project Lifesaver has strategically designed methods and techniques for the specific use of recovering individuals with a cognitive condition. When applied by first responders these innovative strategies enable the most efficient rescue of an eloped client.

## COMMUNITY POLICING COURSES

Project Lifesaver provides first responders with a basic understanding of cognitive conditions, giving them the necessary tools needed to respond to an elopement, and to assess and effectively manage the safe and comfortable return of an eloped client.
